

# Ball / Land Grid Array Sockets

## FastLock Type

**E-tec is now the leading BGA socket manufacturer.**

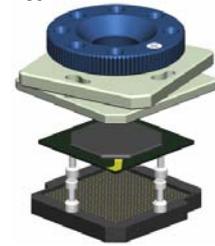

EP patents 0829188, 0897655 US patents 6190181, 6249440 Patented in other countries.

FastLock sockets are available for any chip size and grid pattern. The SMT socket is simply placed and reflowed onto the PCB in the same way as the chip and occupies only a small amount of additional board space. The solderless sockets are mounted with 2 or 4 mounting pegs to the PCB depending on the chip size. The FastLock retainer uses a thumbscrew which does not require any tools for opening/closing of the socket. Torque tools or adjustment of pressdown force are available with this locking system also.

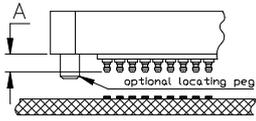

We aim to solve your requirements – your custom sets our standards!

**Please note, we will always request the chip data to ensure we offer a compatible socket.**

### Important Note:

Please check the ball diameters & heights of your chip prior to ordering the standard E-tec BGA (BPC) sockets. Any deviation has to be communicated to E-tec in order to check compatibility with the standard socket design and if necessary to obtain a special order code adapted to your chip dimensions. The standard solderball diameters & heights are the following:

Pitch	ball diameters min/max	ball height min/max
0,50mm	0,25mm   0,35mm	0,20mm   0,30mm
0,65mm	0,25mm   0,45mm	0,20mm   0,30mm
0,75mm	0,25mm   0,45mm	0,20mm   0,40mm
0,80mm	0,40mm   0,55mm	0,25mm   0,45mm
1,00mm	0,50mm   0,70mm	0,30mm   0,50mm
1,27mm & higher	0,60mm   1,00mm	0,50mm   1,00mm

**If the minimum ball diameter of a given chip falls below the above indications, then a BUF socket will generally be proposed.**

### Recommendations:

Solder paste – Please use a solder paste w/o any silver!

E-tec solderless sockets are adapted to a standard PCB thickness of 1.60mm. For a different PCB thickness, please inform E-tec first!

SMT FastLock sockets are recommended to be ordered with locating pegs for soldering to the PCB, to avoid the solderjoints from being stressed due to the torque forces applied with this locking system. If used without locating pegs, the life cycle of the socket may be heavily reduced.

For high pincount SMT sockets, E-tec recommends the use of a pluggable thru-hole socket mounted into a MiniGrid Adapter (see also pages 10, 11 & 12 for more details).

### How to order

X X F x x x x - x x x x - x x x x x x L ← optional for locating pegs
